In the recent years, we observe various scientific conferences that held by Universities, Institutes and also by some companies. The main aim of all of these conferences is providing a scientific network between researchers with famous companies and the process of knowledge exchange (1, 2). These knowledge exchanges will help the researchers and students to be at a scientific environment and this will promote their vision.

Among these conferences, National and International Research Student Congresses are big opportunities for medical students to familiar with scientific meetings (2). By participating at a conference, students can gain soft-skills that will be valuable at every level of their academic life.

A medical student can participate in the meeting by various ways: only participating in the meeting and participating in the meeting and presenting him/her work. If a person has a work that is acceptable for the meeting, he/she is able to present the work as a lecture or a poster. Both of these presentation models will be full of new experience for him/her.

When the student participate in the conference by a lecture, it is very appropriate to visit his/her supervisor. Surely these visits help the student for better presenting of his/her work. Students will learn that have a lecture in different place than their university or clinic and this will open a new window in their academic life. If the work will present in the conference as poster, students must prepare a visual representation of their work and present the summary of their findings clearly to other attendees. Surely in poster-making process, students learn to how they should present the data and how they should write a scientific work with details.

In these scientific environments, students will connect with the scientific community. This participation can help students to familiar with the other projects that are currently in process by the other students and institutions. We always recommend our students identify their interested meetings and participate in them for increasing their first-hand knowledge.

As we know, our knowledge is the results of cooperative efforts and in this way conferences will allow us and our students to have a chance for exploring the known and unknown fields, other than we traditional learn in university.
